

BUSH TURKEY TRACK CLUB

TRAINING PLAN

GOLD COAST MARATHON 2023

2 July 2023

DRAFT

Number of weeks	Average hours per week	Average weekly mileage (estimated)
22	6h 5min - 7h 27min	73 - 97km
	Maximum hours per week	Maximum weekly mileage (estimated)
	7h 45min - 9h 35min	93 - 125km

Last updated 25-Jan-2023

WELCOME

We're excited! A rafter of turkeys training together for a marathon, does it get any better than this? Buckle up for the highs and the lows of marathon training and racing. This plan is an evolving document and will be subjected to continual change throughout the season. The entire training plan is summarised on the next two pages. We shall relase the detailed weekly schedule in 4 week blocks but update and finalise weekly.

The purpose of this plan is to:

1. Align Bush Turkey Track Club members in some or all of their training. We get the most out of our training and ourselves when we train together.
2. Give you some of the tools you need to achieve your marathon goals.

Note that while this plan is designed to give you some of the tools you need to acheive your marathon goals, it is not a replacement for a coach or a experienced athlete in tune with their body. If in doubt, hire a coach.

WHO IS THIS PLAN FOR?

This plan is suitable for intermediate to advanced athletes preparing for the Gold Coast Marathon 2023. This plan assumes you are currently:

- Able to run a sub-40 minute 10km.
- Consistently running at least 4-5 times per week and at least 4.5 hours in total for the past 8-12 weeks.
- Capable of long running for 2 hours or more.

Over 6 hours of running is prescribed most weeks, typically 5 runs with an optional additional 6th easy run and an optional 7th double run. The plan peaks at just under 9 hours for the last few weeks before taper. There is at least 1 rest day per week. Consider if this works for you.

This plan also assumes you are injury free and have no medical conditions that may put you at risk. Get advice from a healthcare professional or coach before commencing marathon training.

HOW TO USE THIS PLAN

This plan assumes you will commence from Week 1 but technically you can jump in at any point, provided you have been doing a similar volume and intensity of training at the point at which you commence.

Consider what races you will be doing in the build to Gold Coast Marathon. We have suggested tune up races on the next page to consider and the plan is built around preparing for and recovering from these races. For alternative races, you will need to adjust the plan to suit.

Calculate your Critical Speed and Training Zones on the next page. Workouts are prescribed using your Training Zones and Critical Speed. The effort prescribed in each workout is based on how you feel on that day, not your fastest race pace.

The plan is broken into three periods, explained on the next page. Workouts in each period are focused on acheiving the objectives of that period or for transitioning to the next period.

Workouts are generally specified in minutes, not kilometres. This is important and the plan caters for an array of athletes with different pace zones.

Decide if you will do the optional extras runs each week. Depending on your fitness and goals, you may choose to shorten or drop these runs entirely or substitute for cross-training.

DON'T BE STUPID

This training plan is only a guide and should be followed by a competent and experienced runner. There is no one size fits all training plan, adjust this to suit your fitness level and goals. Listen to your body, rest well, eat well, recover well, don't be afraid to skip a session, it won't hurt your fitness.

This plan comes with no guarantees, FOLLOW AT YOUR OWN RISK. This plan will not be individualised for your own individual training needs, injuries, work and life demands. If in doubt, hire a coach. Carl Batty of Start Running Stay Running is an excellent marathon coach who knows our training group well.

Carl Batty: 0434 345 145

STRENGTH & CONDITIONING

Strength and conditioning is important if you want to perform at your best and reduce injury risk. Try not to skip it. This plan assumes you are actively conditioning your body to cope with the demands of marathon training. Strength and conditioning is developed through:

Weight Training: Weight training reduces risk of running injury, increases fatigue resistance and increases running power. These sessions include a combination of weights and bodyweight exercises. Exercises must be executed with proper form to reduce risk of injury.

Form Drills and Strides: Regular form drills and strides help improve running economy, neuromuscular coordination and power. Weekly form drills and strides integrated into an easy run are recommended.

Plyometrics: Plyometrics improve running economy, neuromuscular coordination and explosive running power, enabling you to run faster for longer. In Periods 1 and 2, plyometrics are recommended to be integrated into weight training sessions and easy runs. Plyometrics are discontinued in Period 3 to focus on the demands of the marathon.

A strength and conditioning program is not provided in this plan.

NUTRITION

Nutrition and hydration are critical for effective marathon training and racing. This plan assumes you are fuelling your training and racing with adequate carbs, protein, fats and micronutrients. Consider consulting a Sports Dietician before commencing marathon training.

AIS Nutrition Resources

<https://www.ais.gov.au/nutrition>

Suggested Sports Dietician- Peta Carige

<https://petacarige.com/>

Carb Loading

Mayo Clinic recommends 8-12g per kg of bodyweight, 1 to 3 days before the event.

<https://www.mayoclinic.org/healthy-lifestyle/nutrition-and-healthy-eating/in-depth/carbohydrate-loading/art-20048518>

Nitrate Loading (eg beetroot juice)

<https://www.mdpi.com/2075-4663/7/5/120>

OVERVIEW

TRAINING PERIODIZATION

The goal of periodization is to progress from general to very marathon race specific fitness.

Period I focuses on a broad development of running fitness in preparation for the more specific training to come.

Period II focuses on physiological limiters to race performance.

Period III continues the focus on physiological limiters, closely matching the specific demands of the race.

Period	Duration	Start	Finish	Objectives
1	6 weeks	30-Jan-23	12-Mar-23	Period I: Global Power
				Build mileage
				Increase VO2 Max, improve 3-5km race time
				Strengthen bone, muscle and connective tissue, increase mechanical power
				Need to run short and fast and before running long and fast
2	6 weeks	13-Mar-23	30-Apr-23	Period II: Critical Power
				Increase stamina (Critical Speed), improve 10km & HM race time
				Increase lactate threshold
				Build mileage, increase fatigue resistance
				Maintain VO2 Max
3	6 weeks	1-May-23	12-Jun-23	Period III: Marathon Race Specific Power
				Tolerate long durations at marathon intensity
				Maintain stamina (Critical Speed) and VO2Max
				Increase fatigue resistance, maintain mileage
				Taper
Taper	3 weeks	12-Jun-23	2-Jul-23	Shed fatigue, maintain marathon fitness, prepare to race
				Write race plan, study course
				Rest, nutrition

Maximum Running Volume (hours)

YOUR TRAINING ZONES

Training zones are based on *Scientific Training for Endurance Athletes, Skiba (2022)*. Training zones are calculated as percentages of your Critical Speed (CS). CS is an important threshold, usually occurring somewhere between 80-85% of VO2Max and represents the dividing line between exercise you can do for a long time and exercise that is so hard that you have to quit sooner. A great explanation can be found here: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5070974/>

As a rough ballpark, use your 10km race pace as an estimate of CS. Or, estimate your Critical Speed and training zones using the Bush Turkey Track Club Running Calculator: <https://www.bushturkey.club/running-calculator.html>

OR just use the Training Zones determined by your Garmin or Coros watch.

For efforts above Z2, the training plan is colour coded to indicate the primary intensity level of each workout. Paces and heart rate zones are a guide only and you should adjust to suit the perceived effort on the day of the workout.

Zone	Name	Heart Rate		Effort feels like
		min (%CS HR)	max (%CS HR)	
Z1	Easy/Recovery		69%	Very easy
Z2	Steady/Endurance	69%	83%	Comfortable, conversational effort
Z3	Tempo	83%	95%	Half marathon & marathon effort, tempo workouts
Z4	Hard/Threshold	95%	105%	Above LT, 5km & 10km race effort
Z5	Very Hard/VO2Max	105%	120%	VO2Max, 1500m - 3000m race effort
Z6	Anaerobic Capacity	N/A	N/A	Sprint effort

EVENTS TO CONSIDER

Priority	Event	Date	Goals
C	Queensland Athletics 3000m Champs	1 Mar 2023	
C	Sandgate Parkrun 5km	11 Mar 2023	
C	Bush Turkey Track Club Handicap Mile	17 Mar 2023	
B	MBRR April 10km Time Trial	9 Apr 2023	
B	Gold Coast Running Festival Half Marathon	23 Apr 2023	
C	MBRR Club Championship 25km	7 May 2023	
C	Sandgate Parkrun Speed Week 5km	TBA 17-Jun 2023???	
A	Gold Coast Marathon	2 Jul 2023	

GLOSSARY

CS	Critical Speed (see Training Zones)
CS HR	Heart Rate at Critical Speed (see Training Zones)
HAF	Hard As F***
Ramp Rate	Rate of increase or decrease in training. The ramp rate shown on the next page is based on running volume only and not intensity or rate of change in CTL.
LT	Lactate threshold
tempo/ threshold	An effort at or slightly slower than estimated lactate threshold
VO2Max	VO2Max effort, approximately 3km pace
3k/5k/10k	3km/5km/10km race pace
M/HM	Marathon/Half Marathon pace
WU/D	Warm Up/Warm Down
CTL	Concentrated Training Load (estimate of fitness)
ATL	Acute Training Load (estimate of fatigue)
TSB	Training Stress Balance (=CTL - ATL, estimate of form)
